New cargo area facilities completed

The largest cargo warehouse in Japan—boasting some 12,000 m² of lot space—opened at Kansai International Airport on November 10th for use as a forwarder facility inside the airport, and a commemorative ceremony for the opening of the new facility was held on the 21st. This new facility was handed over to NIPPON EXPRESS CO., LTD. on the same day with the opening, and it was quickly utilized as storage space for Beaujolais Nouveau as of the next day, the 11th.

The new warehouse will accommodate Unit Load Devices (ULDs), used for both imports and exports, in order to speed up import and export cargo processing.
